

*Ensure your company's success with a leading ERP solution for process manufacturing that can support your end-to-end business requirements.*

## Choose Our Industry-Specific Solution

BatchMaster Manufacturing for SAP Business One is designed to meet the unique needs of formula-based manufacturers in such industries as Food & Beverage, Nutraceutical, Cosmetics and Life Sciences and Chemicals. Our solution effectively manages all the manufacturing complexities inherent to the products, processes, and variables in these process manufacturing industries. This solution is a single solution, not an integrated one, in which a user has one login, runs one interface, and accesses information from one database.

## BatchMaster Manufacturing for SAP Business One

## Your Process Manufacturing Software Provider

For over 25 years, BatchMaster Software has helped process manufacturers worldwide streamline their production and bring their products to market faster, while reducing costs and complying with customer, industry, and federal regulatory requirements. Our staff keeps tabs on the latest trends, challenges, regulations, and best practices in our targeted process industries, as well as the latest technology advances, ensuring that these areas are addressed in our current and future products and services. Our professional services team helps customers identify their business and manufacturing objectives and requirements, and configure their delivered solution to meet these requirements.

Life Sciences

Chemical

# BatchMaster Manufacturing Features

BatchMaster Manufacturing is a set of software modules embedded within the SAP Business One application. Our Essential set of modules support product development, quality and production requirements. Our Advanced\* set of modules offer additional planning, scheduling and mobile functionality.

## Lab & Formulation:

Dynamically adjust formulas during both product development and production to meet specified target physical or nutritional characteristics.

## Quality Control:

From vendor inspection plans to formula and finished good QC testing, establish a comprehensive QC program that ensures the delivery of quality products to your customers.

## Inventory:

Manage inventory based upon quality status, units of measure, expiration date, lot number, strength, license, serial number, and location to ensure the right inventory is available for manufacturing and distribution activities.

## Packaging BOM:

Manage raw materials, costs, and instructions for sub-assembly and top-level packaging separate from formulas.

## Traceability & Compliance:

Keep compliant with industry-specific and federal regulations, in terms of labeling, lot traceability reports, transactional audit reports, and shipping documentation.

## Planning & \* Scheduling:

Gain granular visibility to available raw material, intermediate, and finished goods inventories, as well as current batch production jobs, in order to employ economies of scale when negotiating purchasing discounts and optimizing batch production schedules.

## Batch Production:

Create and schedule the optimal number of batch jobs required for a product formula and its multiple packaging configurations, based upon the aggregate demand for the given product.

## Product Costing:

Roll up existing and theoretical product costs, as well as fixed, tiered, and scalable costs, to formulas, intermediates, and finished goods during product development.

## Mobile / \* Warehousing:

Employ handheld RF devices to execute raw material and finished goods movements and adjustments within one or more facilities, including receiving, putaway, cycle counting, WIP, pick, pack, and ship tasks.

- Personalize your “Home Page” dashboards and employ “Relationship Maps”.
- Access real time BatchMaster Manufacturing data from within SAP Business One processes without the need to run upload scripts

## Solution Benefits

- Effortlessly meet changing customer demands and ever stringent industry regulatory mandates.
- Streamline processes to quickly scale batch production and bring products to market faster.
- Aggregate, consolidate and optimize production and purchasing processes to reduce costs.
- Provide detailed granular view to manufacturing data in order to make smarter business decisions, faster.
- Run cloud hosted solution to reduce capital investment.
